Demos!

Cloud Automation

Microsoft Flow

Code

Events + data

Azure Functions

Azure Automation

Azure Automation Capabilities

Runbook Authoring in Azure:

Create runbooks to automate all aspects of cloud operations, from deployment, monitoring, and optimizations

Highly Available Engine:

Support requirements for scale and H/A. Built on PowerShell Workflow. Isolation for runbook jobs

Integration into other systems:

Import PS modules and create additional modules and runbooks for Azure services or to connect into 3rd party systems

Azure Automation Summary

Automate processes

Cross-platform configuration
management

Download example runbooks
and scripts

Event grid integration

Hybrid Runbook Worker

500 free minutes

Flow Templates

Save Office 365 email attachments to OneDrive for Business

By Microsoft
Used 235650 times

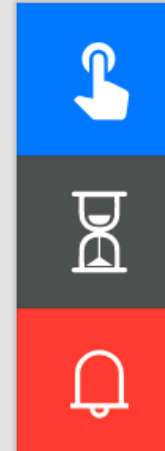

This template features a blue header with an Office 365 icon and a blue footer with a OneDrive icon.

Get a push notification when you receive an email from your...

By Microsoft
Used 136809 times

This template features a blue header with an Office 365 icon, an orange middle section with a OneDrive icon, and a red footer with a notification bell icon.

Send myself a reminder in 10 minutes

By Microsoft
Used 95634 times

This template features a blue header with a hand icon, a dark gray middle section with a timer icon, and a red footer with a notification bell icon.

Get today's weather forecast for my current location

By Microsoft
Used 83902 times

This template features a blue header with a hand icon, a blue middle section with a sun icon, and a red footer with a notification bell icon.

Save Outlook.com email attachments to your OneDrive

By Microsoft Flow Community
Used 64359 times

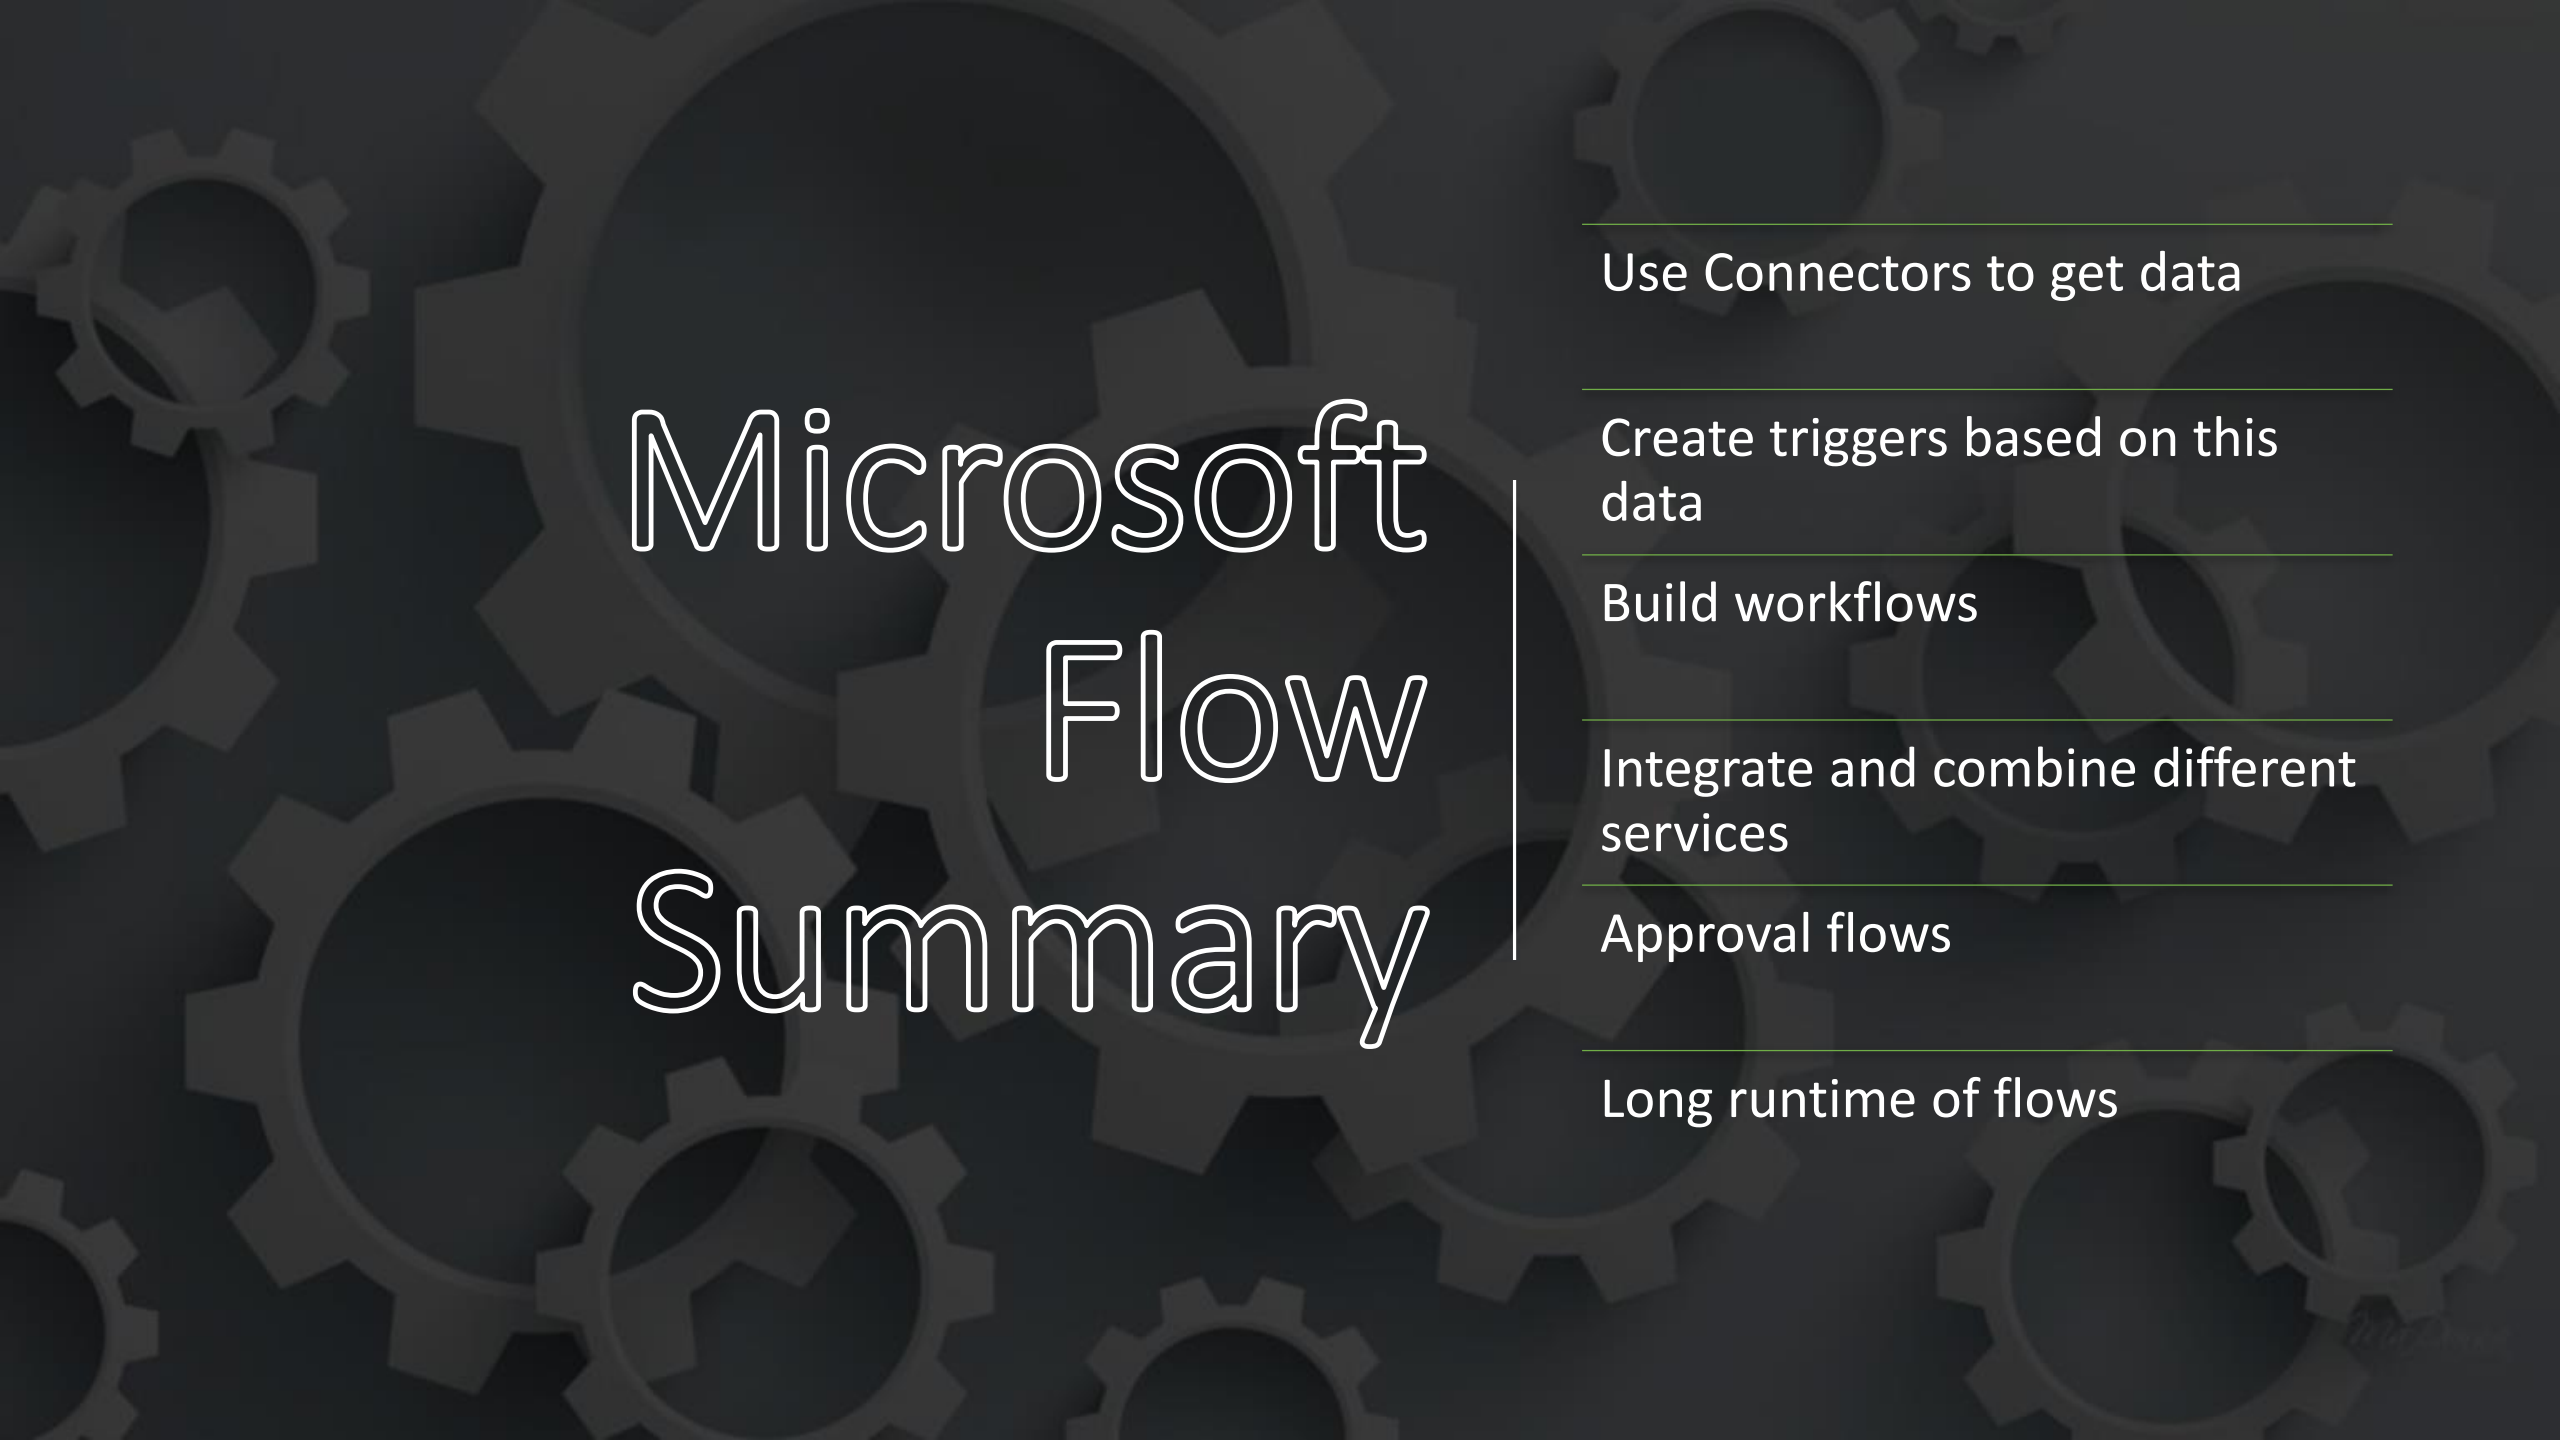

This template features a blue header with an Office 365 icon and a blue footer with a OneDrive icon.

Get a push notification with updates from the Flow blog

By Microsoft
Used 47714 times

This template features an orange header with a RSS icon and a red footer with a notification bell icon.

Microsoft Flow Summary

Use Connectors to get data

Create triggers based on this data

Build workflows

Integrate and combine different services

Approval flows

Long runtime of flows

What are Azure Functions

Code

Events + data

Azure Functions

What is
serverless?

Azure Web Apps

Advantages of Azure Functions

Pay for what you use

No Infrastructure to manage

No maintenance of servers

Can be placed in existing subscriptions

Simplify code writing

What are we trying to solve?

Re-using existing skills

Re-using existing code / scripts

Faster deployment

Less maintenance

Demo 1

Exploring Azure Functions

Demo Summary

- Triggers available
- Experimental flag
- How to create Azure Function
- Delete Azure Function

Experimental Language Support: ☒ Enabled

PowerShell language support is still experimental

Demo 2

Create timed function

Demo Summary

- Create PowerShell function
- Used cron notation

Demo 3

Azure PowerShell Function

Demo Summary

- Which PowerShell version
- What variables are defined
- Saw the variables & files
- Reconfigured function.json
- Used Invoke-RestMethod to run

run.ps1 Save Save and run </> Get fu

1 this does not run

2018-04-23T13:31:48.958 [Error] this : The term 'this' is not recognized as the name of a cmdlet, function, script file, or executable program. Check the spelling of the word, or if a path was included, verify the path and the filename. Run this command and its parameters in the PowerShell prompt to see error details. CategoryInfo : ObjectNotFound: (this:String) [], CommandNotFoundException
FullyQualifiedErrorId : CommandNotFoundException
2018-04-23T13:31:48.973 [Error] Exception while executing function: Functions.HttpTriggerPowerShell2
2018-04-23T13:31:49.005 [Error] Function completed (Failure, Id=abbf3cc1-b7c2-4d19-8358-32)

Error handling

Invocation log Refresh	
Function	Status
HttpTriggerPowerShell2 (Method: POST, Uri: ...)	 2fd84265-3137-4bd3-a077-f548272d3704", Id": "7b3168a5-7494-4825-9ef6-73764f3f4ab7", Code": 500, Code": 0, Message": "An error has occurred. For more information, please see the logs for error ID 2fd84265-3137-4bd3-a077-f548272d3704".
HttpTriggerPowerShell2 (Method: POST, Uri: ...)	
HttpTriggerPowerShell2 (Method: POST, Uri: ...)	

The background of the image is a dark blue gradient with a pattern of falling binary code (0s and 1s) in a lighter blue color, reminiscent of the 'Matrix' effect.

Demo 4

Azure Function Errors

Demo Summary

- Had our function fail
- Looked at different error logs
- Fixed the code based on output

Demo 5

Upload existing modules

Demo Summary

- Allow FTP upload
- Upload module to wwwroot
- Import-Module

Summary

Use existing PowerShell skills

Develop serverless code

Interact with other services

Free tier
